License Manager

Scope with integrated accounting

Management report | Option B | 31 October 2026

Verified position

The authenticated local application was inspected read-only. Reconciliation displayed 1,043 BOEs, 317 import invoices, 2 matched, 53 unmatched invoices and 1,699 duplicate-debit findings. These are confirmed as screen metrics, not confirmed financial errors: their query/counting semantics require source-record validation. Dashboard displayed 109 Missing DGFT records; E1 planning displayed 2 validation issues. No data mutation or accounting operation was performed.

What this option adds

All Option A deliverables plus company-wise accounting: tenant/legal entity boundary, chart of accounts, periods/opening balances, immutable balanced vouchers/journals, source-document posting, AR/AP, payments/receipts, cash/bank, statements and controlled bank reconciliation.

Policy/design	CA-approved entity/chart/period/source policy	25
Journal foundation	Draft/approved/posted/reversed vouchers; debit=credit	120
Subledgers/bridge	AR/AP, payments, advances, post-once bridge	75
Bank reconciliation	CSV/XLSX, dedupe, match/review/close/reopen	80
Migration/cutover	Opening mapping, parallel reconcile, exception queue	130

Financial controls

Every posted voucher must balance and be immutable; corrections create reversals. Operational source records post once through idempotency references. AR/AP must reconcile to control accounts. Banking uses explainable suggestions and manual review; no automatic book entry without approved policy. Tax, GST, TDS and Tally require CA review and are not inferred from fields.

Roadmap and acceptance

Finish Option A integrity/isolation first, then accounting policy/design, journal foundation, subledgers/source bridge, controlled opening-balance cutover, bank reconciliation and optional advanced tax/Tally work. Acceptance: journal invariant, immutable/reversal history, subledger/GL/trial-balance reconciliation, scoped accounting data, duplicate-safe statement imports and CA/owner cutover sign-off.

Effort and decision

Option B adds 175/330/600 days for core accounting; including advanced tax/Tally raises the addition to 235/460/860. Full scope is 412/775/1,370 days before advanced accounting. Choose it only when in-app AR/AP, cash/bank visibility and a CA-supported cutover are materially needed; it is not required to improve licence operations.
