Enterprise assessment

Enterprise modernization assessment | 31 October 2026

Trustworthiness of company isolation, balances, restrictions and reconciliation must precede visual redesign and new accounting.

Verified position

Local authenticated screens and repository evidence were inspected read-only. Production remains unverified. Reconciliation figures are displayed metrics only: 1,043 BOEs, 317 invoices, 2 matches, 53 unmatched invoices and 1,699 duplicate-debit candidates.

Scope and decision

Data/reconciliation	Reproduce/classify candidate metrics	P0
Company isolation	Tenant-scoped server data boundary	P0
Calculations	Canonical balance/restriction contract	P0
UX/testing	Actionable workflows and evidence gates	P1

Integrity statement

No source code, business data, migration, configuration or production system was changed. Critical business outcomes require isolated test evidence and owner/domain approval before implementation.
